

Making a difference couldn't be easier...

Introduction

With the introduction of the Code for Sustainable Homes in December 2006, PTS recognise and understand the importance to tackle climate change by using alternative methods of heating and to encourage the use of water saving and water recycling products to help protect the environment.

Going back to 2006, PTS have been working closely with key manufacturers to develop a varied profile of renewable products which help our customers comply with the Code for Sustainable Homes. With a growing appetite among consumers for more sustainable products and services we aim to provide our customers with not only a choice in product, but a complete renewable energy solution.

PTS Renewable Solutions – Aylesford

Within such an important sector where knowledge and the understanding of product is key when planning and completing successful projects, PTS are making the unique step forward to increase the awareness of renewable energy and renewable products... Our first dedicated renewable energy branch.

PTS Aylesford offers our customers an extra service when looking at renewable energy products. A branch dedicated to the awareness of renewable energy and the products that will help minimise our overall carbon footprint. PTS Aylesford provides our customers and future customers with not only commitment to stock and supply renewable products, but an area to explore and progress.

Within our exhibition area, visitors to Aylesford have all the latest product information at their finger tips. Knowledge and understanding of renewable products is key when designing projects so we've brought together a wealth of knowledge and understand to help and educate.

Renewable Energy Products

Renewable Energy products are now becoming widely accepted as a way to not only save money as fuel prices continually seem to rise, but also as one of the major ways in which we can assist in reducing our carbon footprint on the environment.

PTS have put together a comprehensive range of products to help our customers comply with the Code for Sustainable Homes which include solar thermal solutions, a range of ground source, air to water and exhaust air heat pumps and biomass boilers. Where the reduction in water consumption is also in everybody's thoughts, we offer our customers a wide range of water saving products for domestic and commercial use. PTS Aylesford stock and supply rain water and grey water harvesting solutions, whilst offering our customers a wide range of water saving sanitaryware products to assist in reaching Code for Sustainable Homes code levels.

Renewable Energy Product Range

Heat Pumps: Ground Source, Air Source & Exhaust, Air Heat Recovery

Solar: Solar Thermal, Solar Cylinders, Solar Photovoltaic

Rainwater & Grey Water Harvesting

Biomass

CHP (Combined Heat & Power)

Water Saving Sanitaryware Solutions

Underfloor Heating

Energy Efficient Controls

Your One Stop Renewable Energy Solution

In a time when change is critical and knowledge should be shared to make these crucial changes, PTS offer a one stop renewable energy solution to our customers. PTS Aylesford is our renewable branch of the future. This is our commitment to help educate our customers in renewable energy technology, but most importantly to build a better future for generations to come.
